

OR-ION Concentrated Mineral Complex

Living, Liquid Minerals From Nature

There are hundreds of companies providing various forms of mineral supplements to those people intent on sustaining health through a good diet and mineral supplementation. Sadly, this multibillion dollar industry produces, for the most part, "colloidal", "bio-available", and "ionic" elements that find their way into the sewers of America, having provided little if any real benefits to the customer, but enormous profits to the manufacturer. This has not been done intentionally, and the placebo effect has been fantastic, but the increase in diabetes, heart disease, Alzheimer's, depression and obesity, just to name a few of the symptoms plaguing the world today, suggests that these supplements are simply not working as they should. There is nearly unanimous agreement

among scientists, nutritionists and politicians in Congress and the Senate, regarding the depletion of minerals in U. S. soils and the alarming consequences of this vanishing nutrition.

Today's advances in science, particularly in the sub-cellular realm of the human body, have given serious researchers new insight into the workings of the "inner universe" inside of our bodies. Although modern science is just beginning to peer into the sub-cellular, the human body has been dealing with it for thousands of years. As complex as this all sounds, it really becomes very simple. **We are made up of minerals**, the same minerals found in the periodic table called "elements". The minerals are but a carrier (transporter) of differing ionic frequencies throughout our magnificent, human electrical system. These electrolytes are absolutely essential in the performance of even the simplest of tasks. When this science is combined with the dimensions of light wave energy (photons), an old science begins to emerge, the botany of photosynthesis, the combining of life-giving light frequency with the mineral frequencies drawn up into plants to produce nutritional vegetation. **Science cannot duplicate this process.**

Our bodies require nearly two-thirds of all the elements (minerals) currently known to man in order to maintain health, and keeping these minerals in balance is a complex yet incredibly vital task. But, those elements are not helpful unless they actually carry the energy (**electrical frequency**) that our Maker intended our bodies to have. Most mineral supplement products contain ZERO electrical frequencies! For the most part, they are dead dirt. Ideally, the best way to supply the human body with the minerals we need is to eat mineral rich vegetation. We know this to be true because all ancient plant-derived minerals found throughout the world have all of the known elements (minerals) in their proper proportion, no matter where they're found. These rich mineral beds are filled with the minerals we need each and every day to remain healthy, because they come from plants that lived hundreds or even thousands of years ago. Unfortunately, you cannot find plant life existing today that contains all of the minerals that were once in the soil. It's just not possible to harvest vegetation that would be even close to complete in all the bulk and trace minerals needed to live a healthy life.

All of the minerals found in these ancient beds are found in their proper proportion, so it stands to reason that this God-given proportion is essential to proper diet and health, today. We need to eat every day, so it must be important to have minerals every day. We may never know exactly how the combination of these minerals works, cohesively, to perform their function in the human blood stream, or their effect on the various organs and tissues, but we do have a more complete understanding, due to the progress made in nano-technology and advances in electrolyte application. For a mineral to function properly, two properties must be present: (1) the minerals must be in proper form, and (2) they must carry the correct ionic frequency that is compatible with the human blood cell. In our opinion, the only minerals worth spending your hard-earned money on are minerals that meet that criteria. **OR-ION** minerals are retrieved from no less than three of these ancient beds, and are then refined with a proprietary, multi-phase process, and enhanced with just the perfect ratio of Fulvic Acids to re-establish the natural frequency code designed by our Maker for our bodies. **Without that frequency, a mineral is useless.**

Fulvic Acids are rapidly becoming the most researched of all natural occurring healing agents, due to its remarkable properties. Fulvic Acids have been called the "the world's finest electrolytes, organic, natural

electrolytes that can balance and energize biological properties." These research studies show convincingly that the physical well being of plants, animals, and humans is determined by proper electrical potential. Fulvic Acids (FA) helps to correct or alleviate imbalances in the blood because they promote electrochemical balance both as a donor or receptor; they have the ability to lose an electron, becoming a donor when needed, and gain an electron, becoming an acceptor. (FA) also enhance nutrients by preparing minerals to react with cells and allows minerals to interact with one another.

Fulvic Acids dissolve and transpose vitamins, coenzymes, auxins, hormones, and natural antibiotics that are generally found throughout "mineral rich" soils, making them once more available. Fulvic Acids catalyze enzyme reactions and especially influence respiratory catalysts; increase the activity of several enzymes, including transaminase and invertase; detoxify pollutants; dissolve silica; enhance cell division and elongation; enhance the permeability of cell membranes; increase the metabolism of Proteins; catalyze vitamins within the cell; and chelate all monovalent and divalent elements to which they are exposed. Due to these properties Fulvic Acids are the most powerful natural free radical scavengers and antioxidants known.

The human blood cell also emits electric frequencies; "cellular language" to attract needed (compatible) frequencies to perform their purposes in the human system. The carriers of these frequencies are minerals. **If the individual cell is restored to its normal chemical balance thereby turning its electrical potential, we will have given life where death and disintegration would normally occur.** Now you know why Fulvic Acids are in our minerals! All of our plant derived minerals work in concert, and harmoniously with each other, and individually, to perform the function purposed by our Maker, and are necessary in the proper makeup of the human body. **OR-ION** liquid, ionic, organic minerals are a complete electrochemical nutrient; exactly what health care professional and nutritionists have been searching for, over throughout the ages.

You may ask, "Aren't Fulvic Acids in everyone's minerals?" The answer is No, No, No. Why? They're too expensive, and most manufacturers just don't want to spend the money, and many manufacturer's are just caught up in producing minerals "the old fashioned way". Most minerals products do not have the proper form, and **virtually none of them are properly**

recharged. Some of the best known minerals are "mined" from primordial forests of vegetation-petrified wood! These minerals can never be returned to their proper form, and consequently are incapable of carrying the proper electric frequency they once had, nor can they be reduced to the nano sized particle found in plants. Some have been recaptured from ancient beds, but remain useless since they have not been recharged.

Finally, **OR-ION** minerals are "super-charged" with an additional infusion of "subtle-energy" frequencies to complete the process. Then, and only then, will we offer them to you, the consumer.

OR-ION Concentrated Mineral Complex

4-6 Week Supply

\$39⁰⁰
