

Serralone™

"Live Life to the full, and Leave Pain Behind"

Whether you suffer from allergies, inflammatory activity, sprained muscles, or even a broken bone, **Serralone™** is for you. Whether the problem is your ligaments or your nasal passages, this effective formula eases these symptoms, and many more. **Serralone™** is a powerful *proteolytic* enzyme formula that consists of only one powerful natural ingredient, *serratiopeptidase* (serrapeptase) in a vegetable cap . . . nothing more. . . no excipients, no toxic substances, nothing.

Serrapeptase is an enzyme produced in the body of silkworms. Without serrapeptase (which dissolves non-living tissue) the silkworm wouldn't be able to break down its cocoon and emerge as a moth. But serrapeptase has another appealing quality: **It's an effective anti-inflammatory.** So combine inflammation reduction with the ability to dissolve non-living tissue (such as arterial plaque) and you have a potent natural agent that may help prevent and treat atherosclerosis as well as other conditions associated with inflammation, like Rheumatoid Arthritis.

In Europe and Japan, clinical studies have shown that serrapeptase **prompts anti-inflammatory activity**, anti-edemic activity (the lessening of fluid retention), and **fibrinolytic activity** (the dissolution of protein buildups). In a trial involving 174 patients, Japanese researchers tested the ability of serrapeptase to ease post-operative swelling. The researchers reported that "the degree of swelling in the serrapeptase-treated patients was significantly less than the placebo-treated patients at every point of observation after operation up to the 5th day."

The late Hans Nieper, M.D., was a prominent alternative medicine internist in Hannover, Germany, and a leader in researching serrapeptase as a treatment for arterial plaque. Dr. Nieper's files include many cases of patients with restored circulation and mobility: One woman avoided hand amputation, while two elderly men who had been scheduled for heart bypass surgery improved so dramatically that they were able to cancel their surgeries. More than 50 other

patients reported positive results while taking the serrapeptase formula over a two-year period.

Another study involved 66 patients undergoing surgery for torn ankle ligaments. Patients treated with serrapeptase experienced a 50 percent decrease in swelling just three days after surgery. The remaining patients (treated with bed rest, leg elevation, and application of ice in some cases) had no reduction in swelling over the same period.

Researchers have also tested the ability of serrapeptase to **ease inflammation disorders** such as carpal tunnel syndrome and fluid retention conditions such as varicose veins. At the SMS Medical College in Jaipur, India, researchers tested serrapeptase on 20 patients with carpal tunnel. Subjects were instructed to take 10 mg of serrapeptase twice a day for six weeks, then return for reassessment. Sixty-five percent of the patients showed significant improvements. No adverse side effects were reported.

Researchers in Federico, Italy tested serrapeptase on 20 patients with varicose veins. The patients took 10 mg of serrapeptase three times a day for 14 days. The supplement generated good to excellent improvement also in more than 60 percent of the subjects. It reduced pain in 63 percent of cases, fluid buildup in 56 percent, abnormal skin redness in 58 percent, and nighttime cramps in 53 percent.

Serralone™ is naturally processed commercially through the process of fermentation to help the body to maintain optimal health, and it stands alone in fighting the combined threats of fibrin, mucous and inflammation in the body. Fibrin is an insoluble protein involved in blood clotting. When an injury occurs, fibrin is deposited around the wound in the form of a mesh, which dries and hardens, so that bleeding stops. Fibrin is developed in the blood from a soluble protein, *fibrinogen*. The conversion of fibrinogen to fibrin is the final stage in blood clotting. Platelets, a type of cell found in blood, release the enzyme thrombin when they come into contact with damaged tissue, and the formation of fibrin is complete. Fibrin may build up throughout the body, and manifest in many undesirable and unhealthy ailments, including abnormal mucous buildup. This super protein-digesting enzyme breaks down "non-living" matter in the human body, and promotes a reduction in levels of dead tissues in the circulatory system. This action is known to promote smoother, healthier bloodflow and reduction in inflammation.

Serralone™ also promotes cleaner, clearer nasal passages, and healthier veins and capillaries. As it fights fibrin build-up in the cardiovascular system, organs, and muscle tissue, this often results in the normalization of inflammation levels throughout the entire body, and a decrease in generalized pain.

Serralone™ is *bio-energy infused* serrapeptase, alone. Infuse implies a pouring in of something that gives new life or significance. The formulators, working with world-renown Russian physicist, Yuri Kronn, Ph.D., have mapped the subtle energies emitted by the **Serralone™** formula and infused those same energies back into it, making it truly unique, as a health-building supplement. This is where "ancient knowledge meets new science".

These energy infusions "tune up" the entire body's energetic system that program the body functions on all levels; physiological, psychological and mental. This tune-up allows the body to rid itself of the causes of problems much faster and more effectively, instead of just treating "symptoms". According to Dr. Kronn, "appropriately energy-infused remedies are absorbed faster and are more effective in the body, especially that part of the body that is to receive the benefits from any particular formulation." The energies amount to a "chaperone" that moves the ingredients to where they are supposed to go, and thereby maximize their effectiveness. This unique infusion of specific "subtle-energy" frequencies transforms a great product into a truly extraordinary one.

Serralone™
120,000 SU of Serrapeptase

2 month supply

\$59⁰⁰

- * Always Subtle-energy Infused
- * Always Excipient-free
- * Always Vegetarian
- * Always All-natural
